

# Physics Colloquium

Friday, March 24, 2017

4PM – 5PM

118 Gessner

**Roy Niemann**

*I Have My Degree, What Now?*

My resume has the following jobs: Janitor, Physics Tutor, Auto Parts Salesman, Mechanic, Dragstrip Timing Official, Semiconductor Lab Tech, Machinist, Professional Engine Builder and Clutch Specialist, Physics Teacher and Sales/Application Engineer.

As a student of ESU's Physics program, I was looking down the road to see where my next step was to get a real job and make money with my education. I was often a little forward with professors—asking “how does this theoretical nonsense apply to real world activities?” This was often met with a helpful example that I could research after class; however, when it came to graduation talks about where I could get a job, I was on my own.

The goal of this discussion will be to introduce fluid power/industrial automation and answer any questions about life beyond ESU.
